

# Making an impact

ANU Library

# Topics

- Research data management
- Open access
- Bibliometrics
- Researcher profiles
- Where to publish

# Bibliometrics

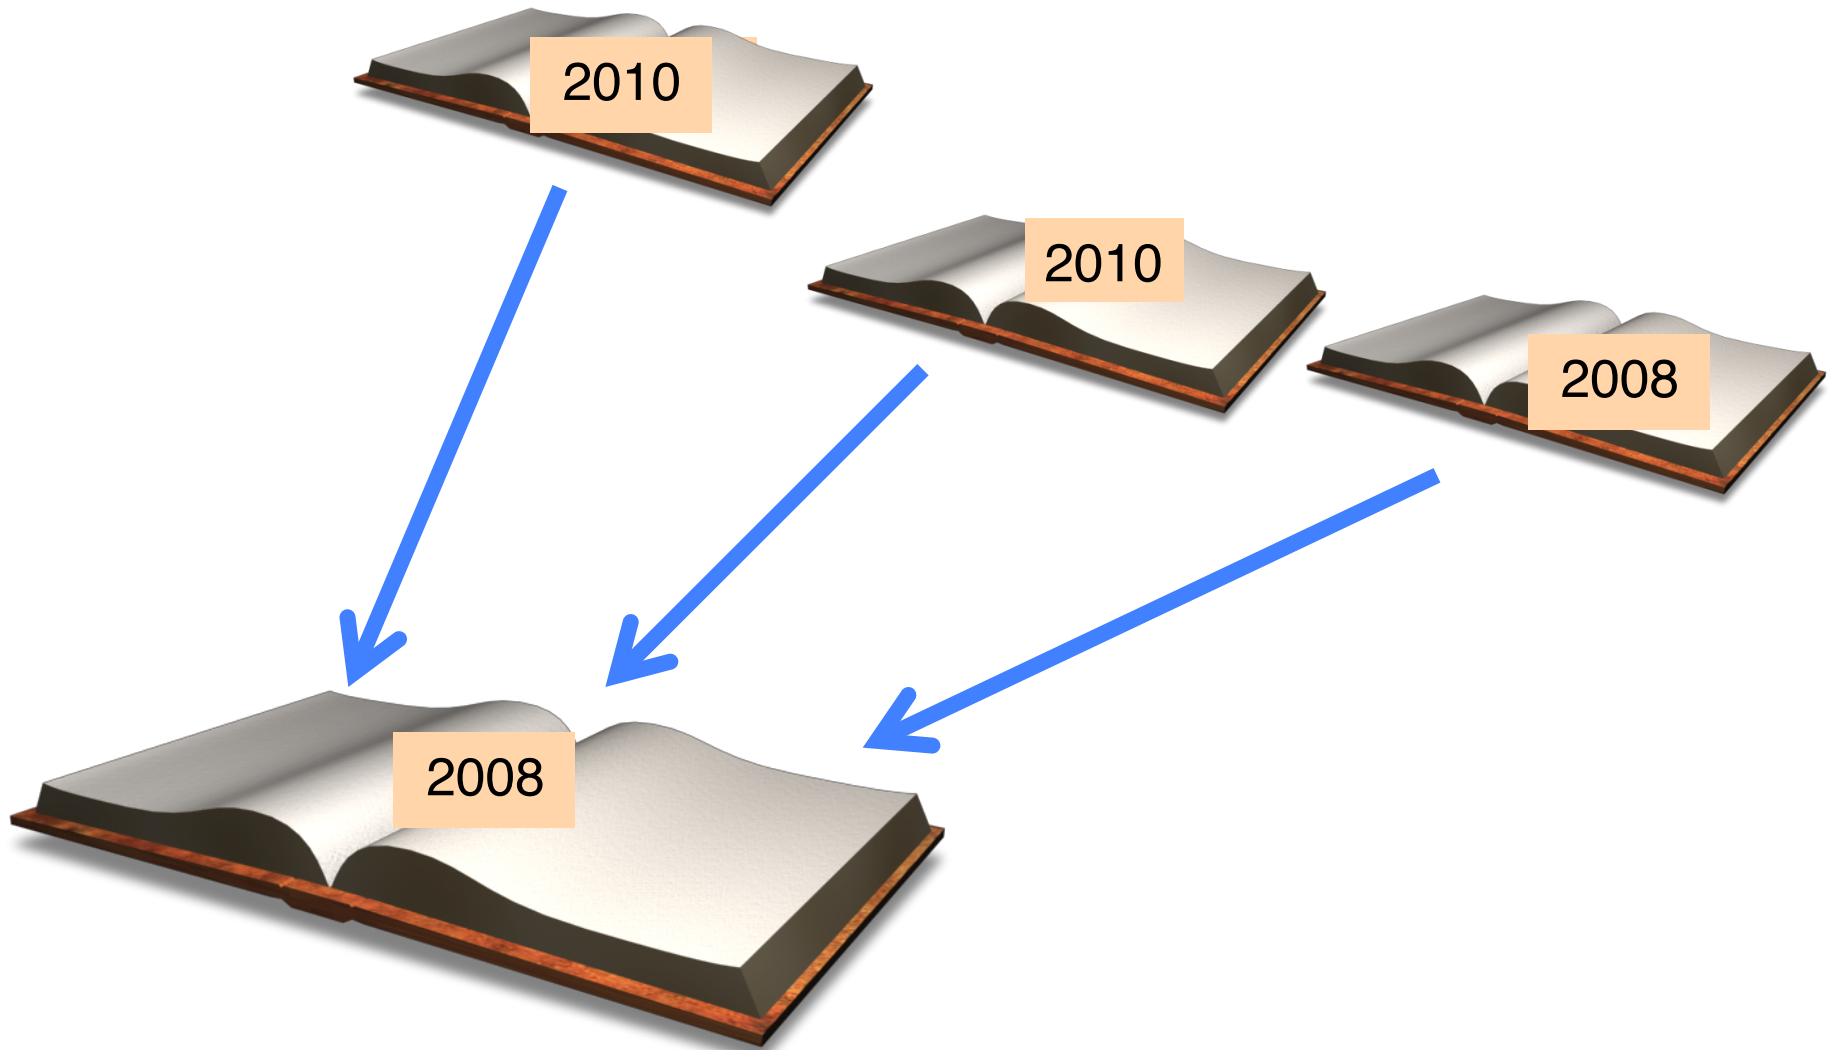

# How is impact measured – the art of bibliometrics

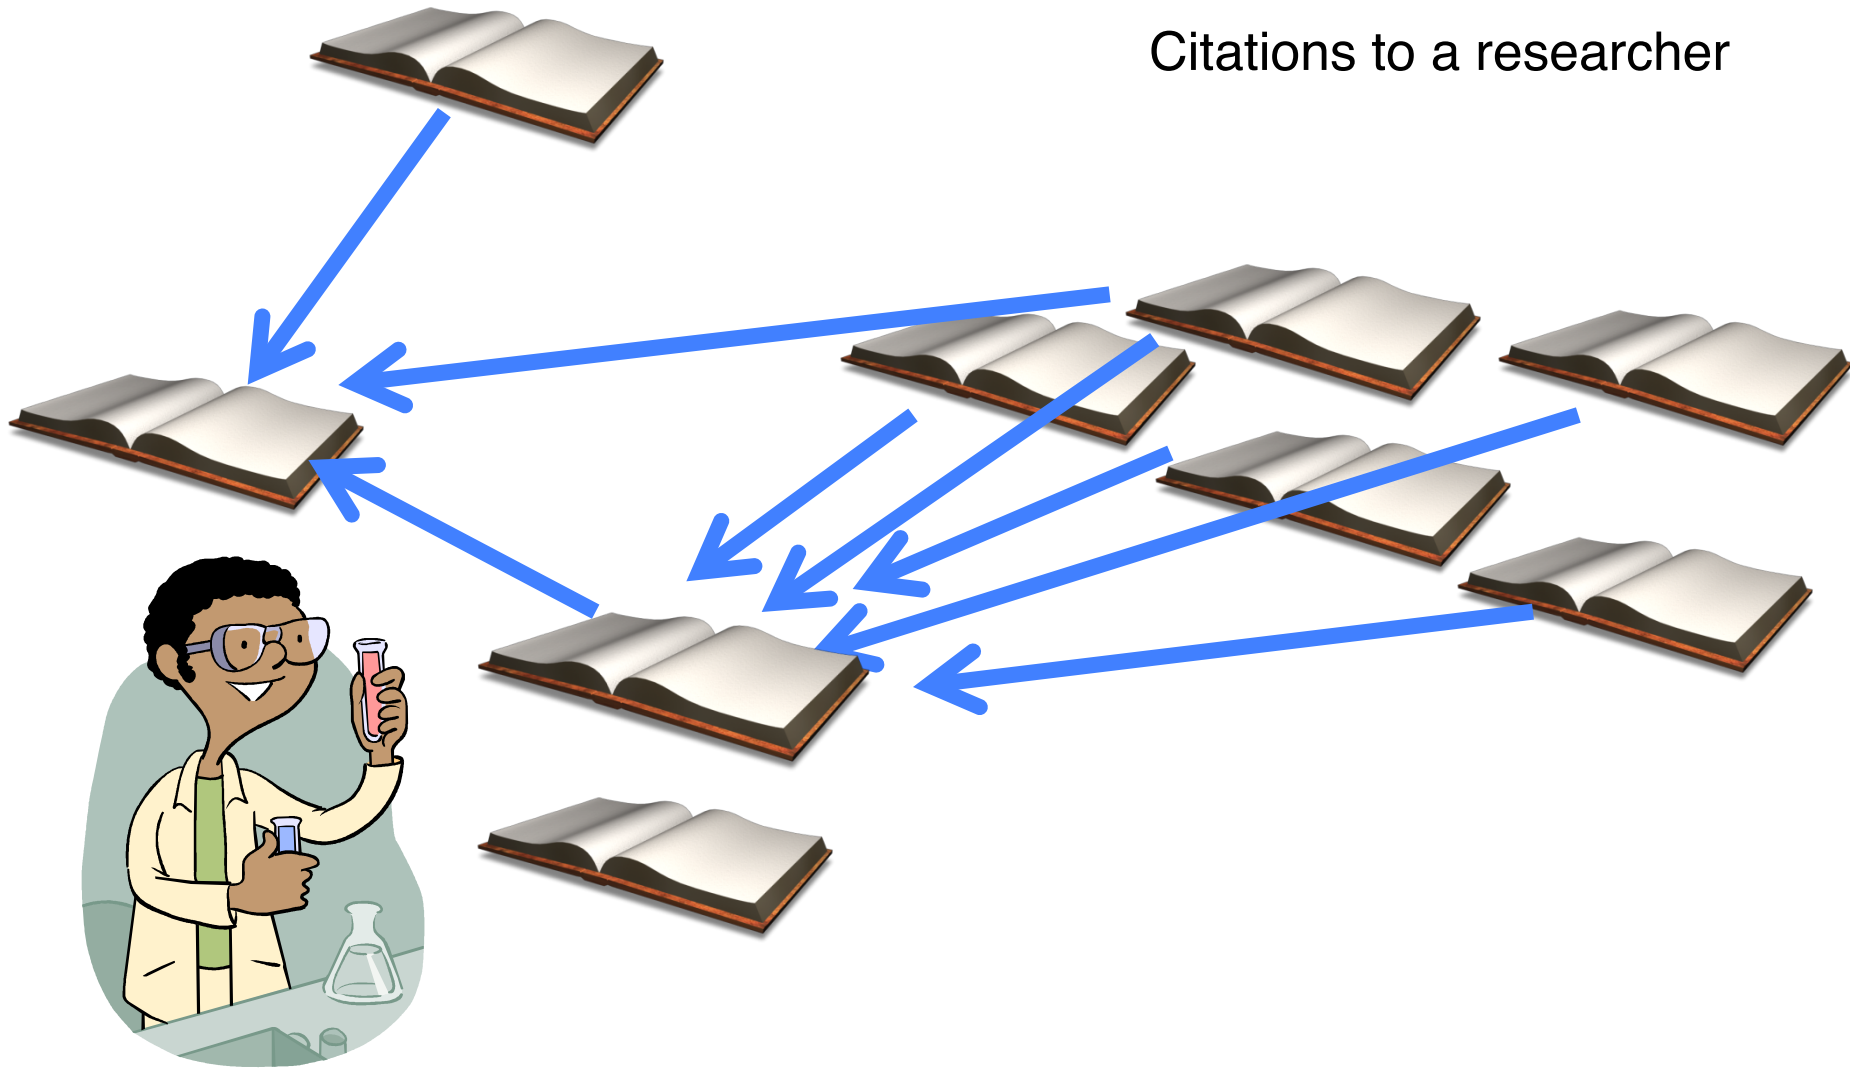

Bibliometrics is a statistical analysis of books, articles, or other publications.

Bibliometric analysis use data on numbers and authors of scientific publications and on articles and the citations therein (and in patents) to measure the “output” of individuals/research teams, institutions, and countries ...

## Citations to an individual paper

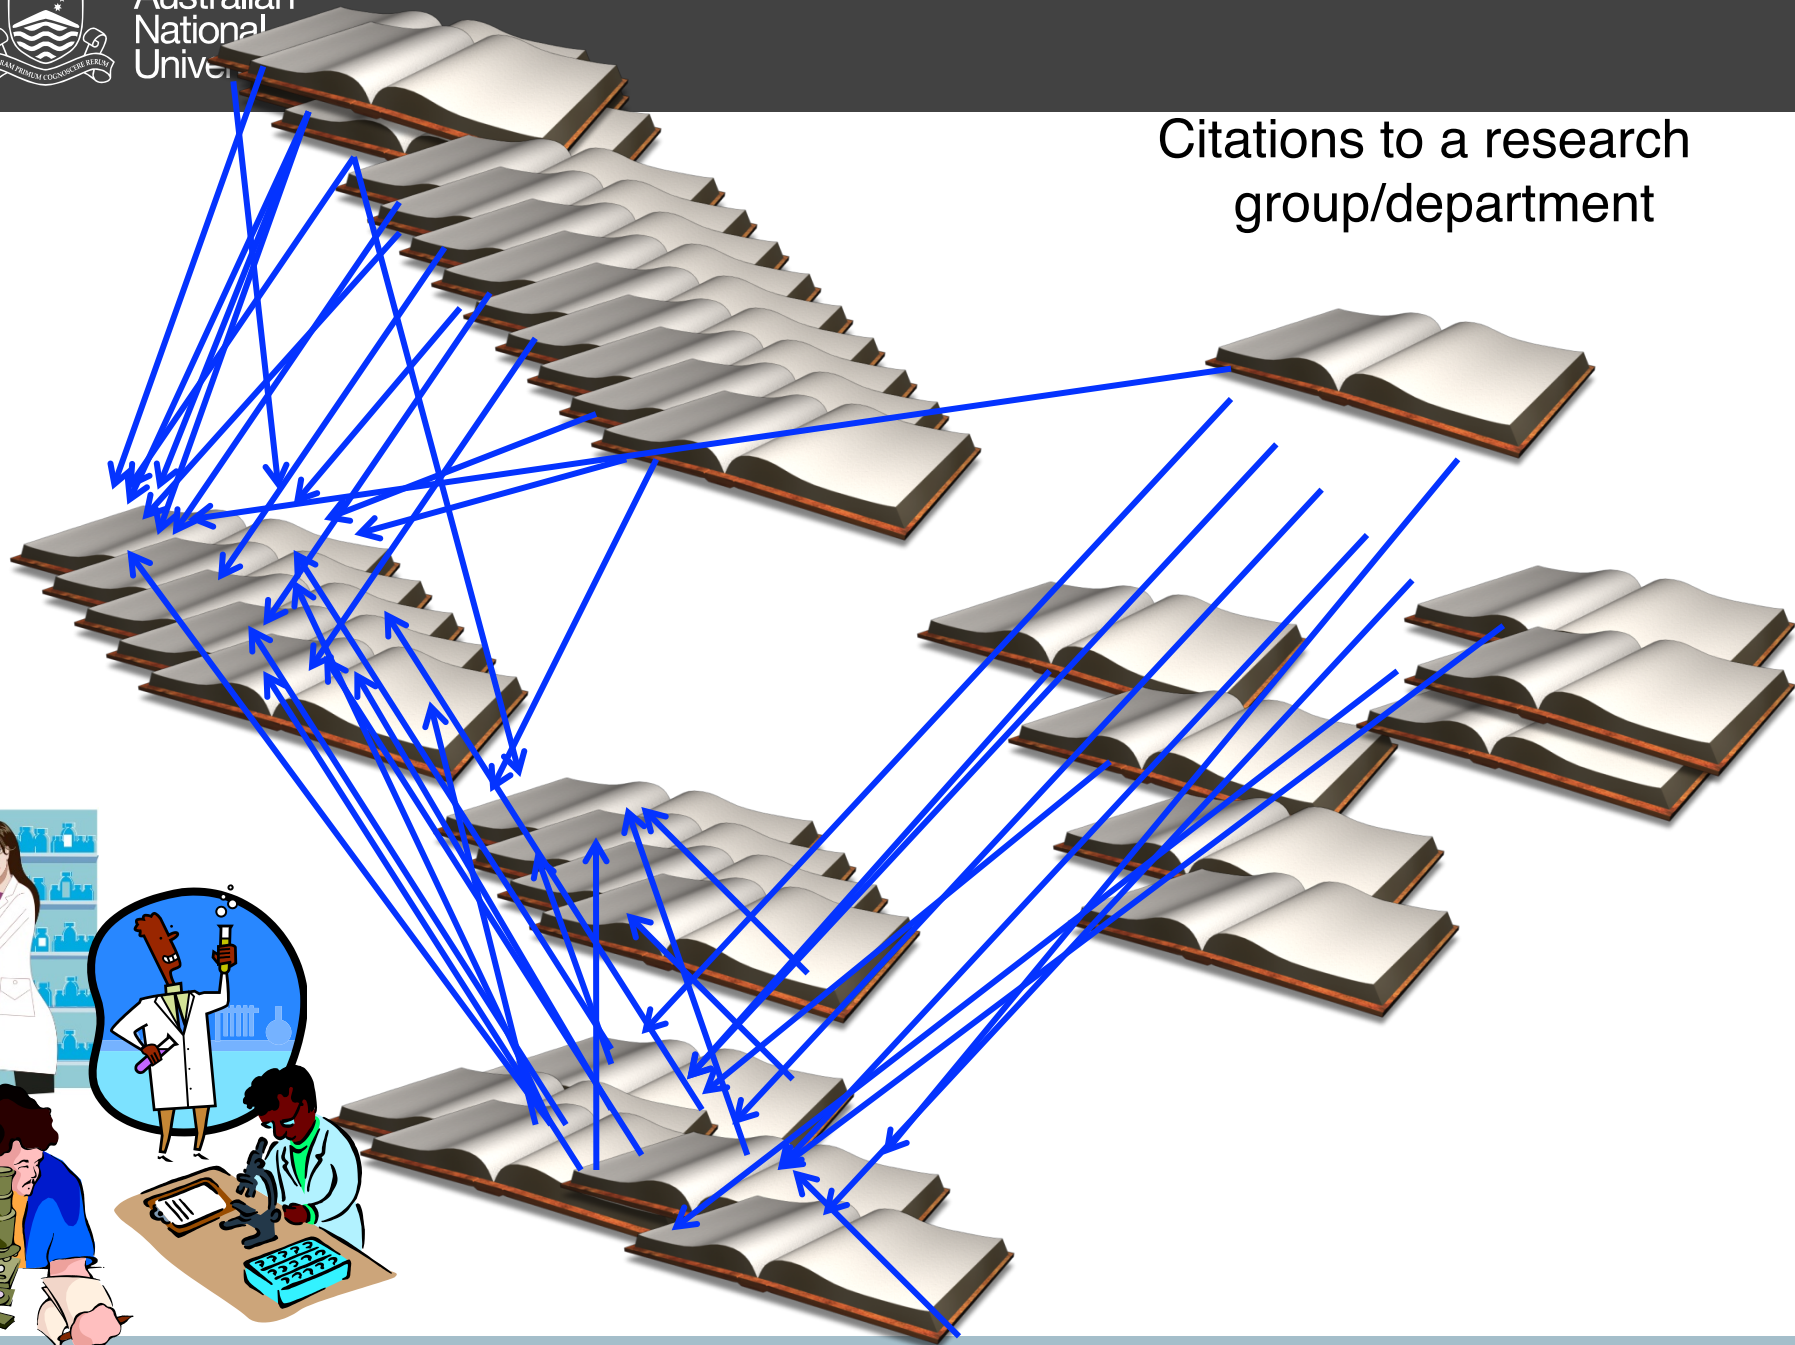

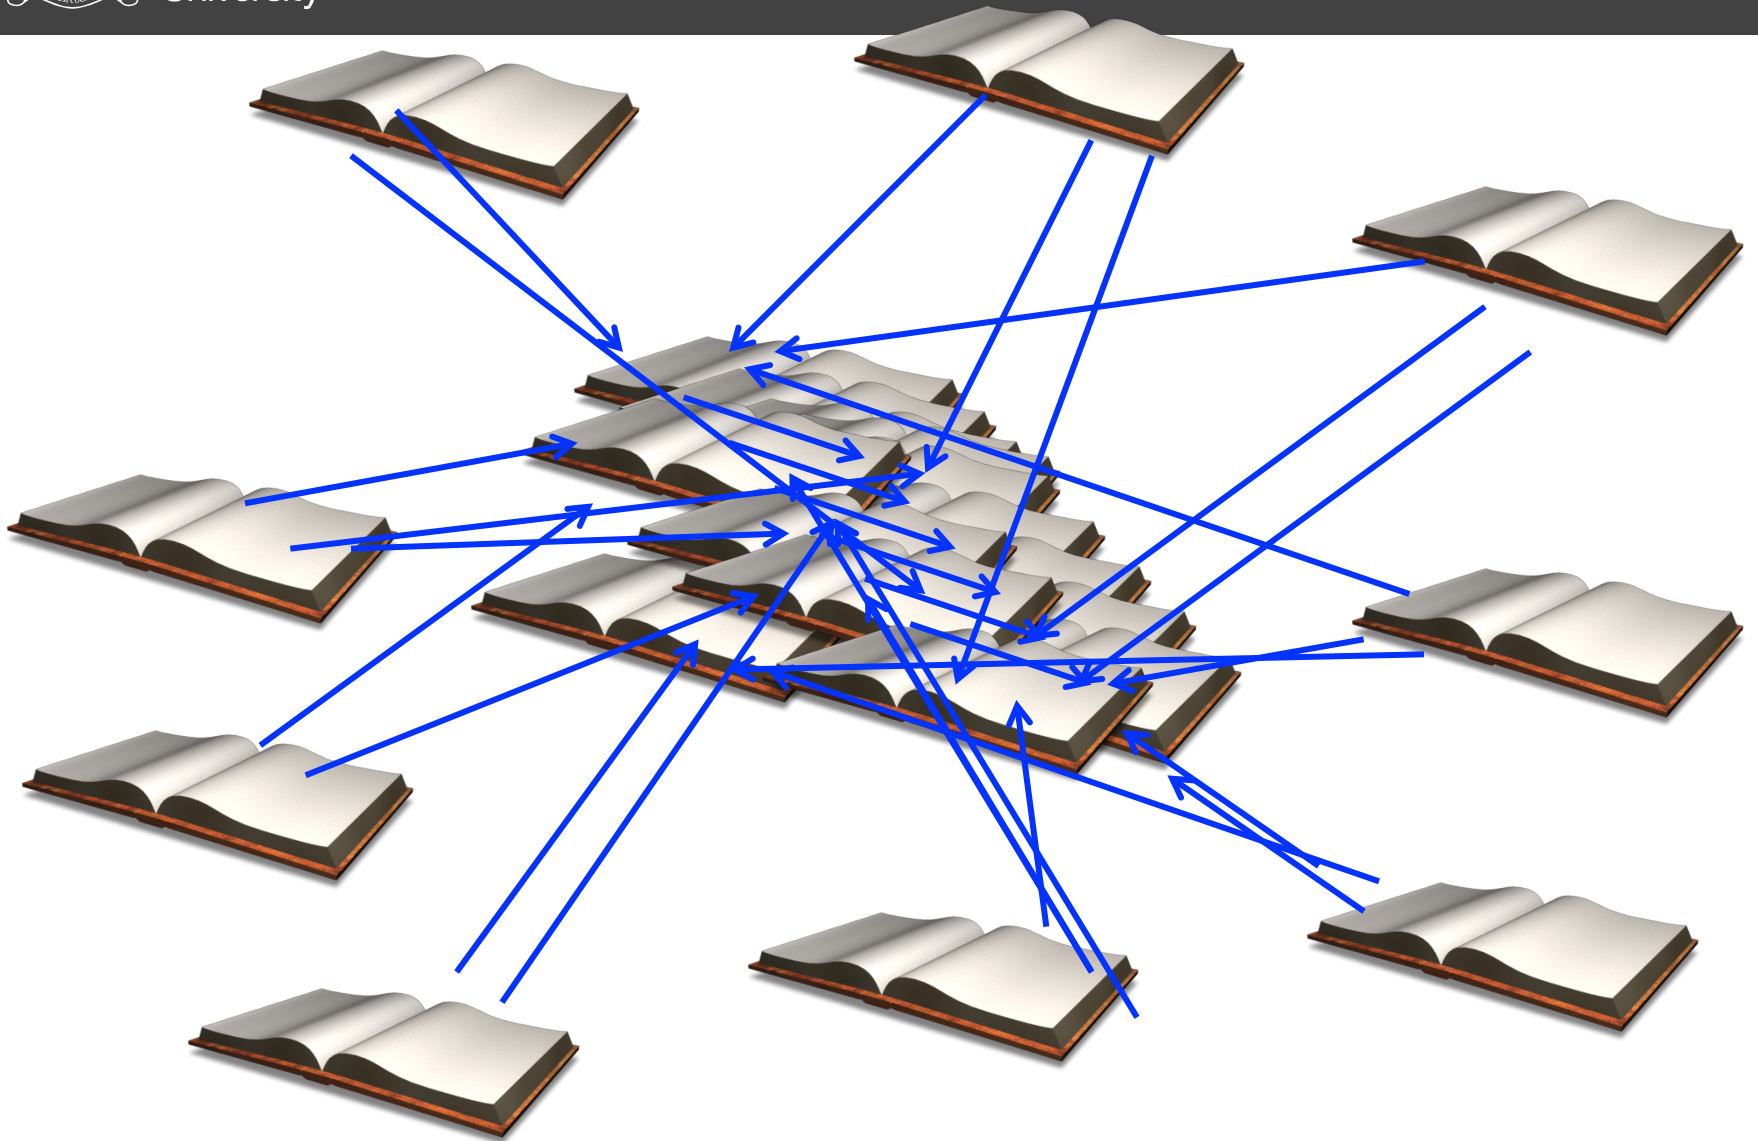

# Citations to a researcher

Citations to a research group/department

Citations to a journal

# Many ways to measure

- ISI
- JCR
- Eigenfactor
- H-index
- Journal analyser
- Altmetrics
- Google Scholar

# ISI – Web of Science

Indicates impact of individual article – how many times has my article been cited?

Links to Journal Citation Reports for information on impact of the journal

# H-index

- Attempts to quantify an individual's research output
- Can be calculated manually or automatically in Scopus or Web of Science

[http://www.harzing.com/pop\\_hindex.htm](http://www.harzing.com/pop_hindex.htm)

# Google Scholar

- Designed to “help authors consider where to publish”
- Based on h-index
- Can browse publications in broad areas such as engineering and computer science, development economics

[https://scholar.google.com.au/citations?view\\_op=top\\_venues&hl=en](https://scholar.google.com.au/citations?view_op=top_venues&hl=en)

# Journal citation reports (JCR)

- Thomson Reuters – data from WoS
- 5000 journals in science & technology
- 1500 journals in social sciences

Indicates -

- Highest impact journals
- Most frequently used journals
- Largest journals

# Journal analyser

- Scopus (Elsevier)

<http://www.scopus.com/source/eval.url>

- SJR – weighted by prestige of journal
- SNIP - measures conceptual impact by weighting citations based on total # of citations in a subject field
- Freely available

<http://www.journalmetrics.com/>

# Eigenfactor

Takes into account the “prestige” of a journal  
Attempts to analyse the influence of a journal

Journals with  $\wedge$  impact factor in a field have higher Eigenfactor

Data from Thomson Reuters JCR

<http://www.eigenfactor.org/>

# Impact factor

JIF – average # times article from journal has been cited in last two years

Uses ISI Web of Knowledge data

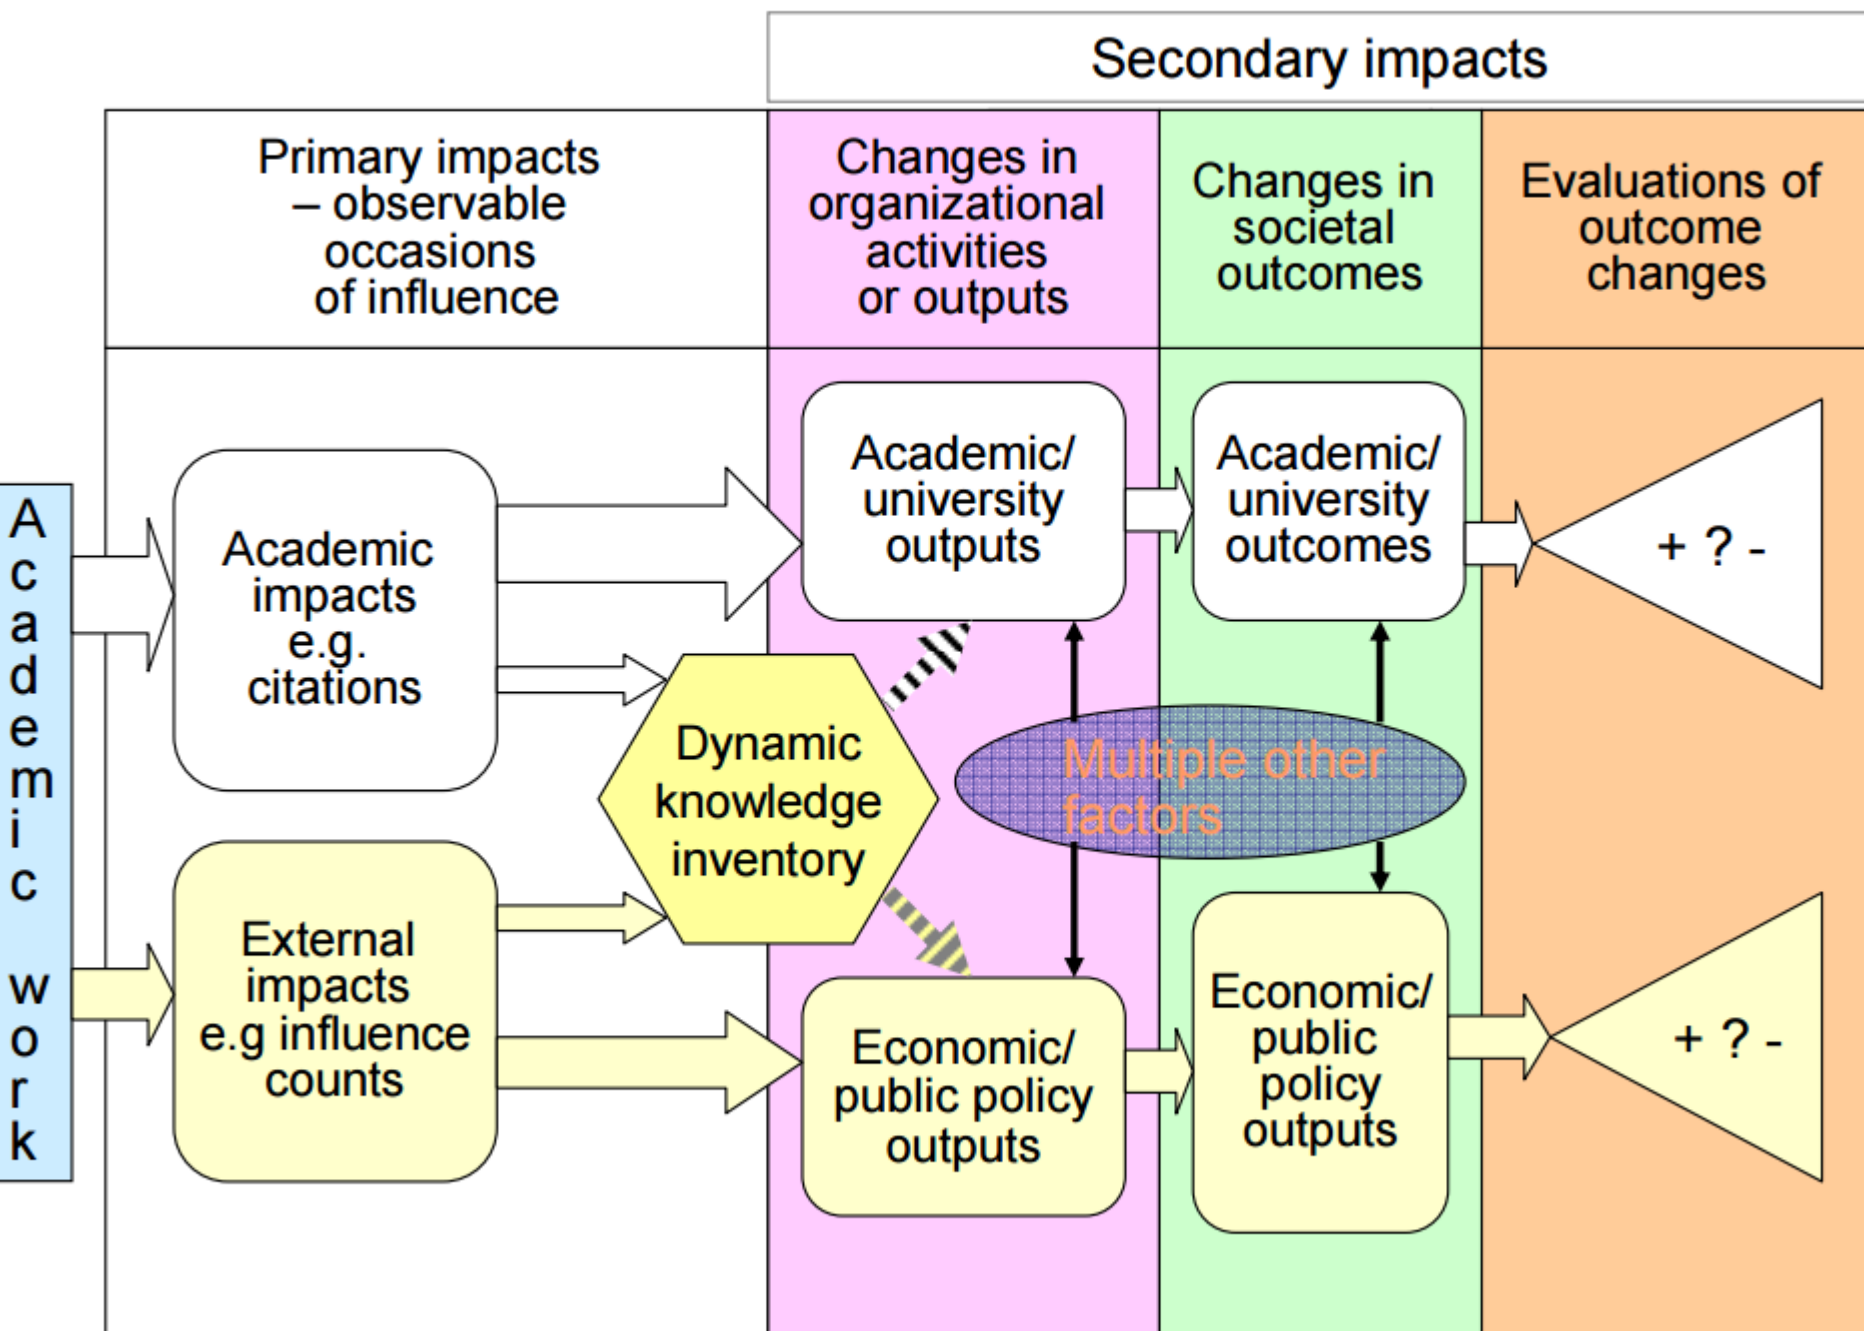

# Problems

That sounds great BUT...

Remember results are influenced by –

- \* Size
- \* Time/frequency of publication
- \* Non-English language journals
- \* Journals not indexed by Scopus/WoS

**Figure 1.1: The primary and secondary impacts of academic research**

# Altmetrics

Reflect impact of article, not container

\*Altmetric [www.altmetric.com](http://www.altmetric.com)

\*Impact Story <https://impactstory.org/>

# ImpactStory.

Open carrots for Open science

Funders bring the sticks, we add carrots. ImpactStory helps open scientists tell the story of their research impact: we reveal diverse metrics of engagement and reuse for articles, datasets, software, and more.

Embed on your CV

Custom persistent URL: [impactstory.org/CarlBoettiger](http://impactstory.org/CarlBoettiger)

Context for your metrics

Highly cited by scholars  
 This item has 23 Mendeley readers. That's better than 91% of items created by 406 of Science in 2012, indicating it's highly cited by scholars. Click to learn more.

We uncover engagement and use across the Web:

- Public: Mendeley, Delicious, Facebook, Twitter, GitHub, SlideShare
- Scholarly: CiteULike, CrossRef, F1000, PLoS, Scopus, ScienceSeeker

Open data, open source

ImpactStory is a non-profit built around open tools to support web-native scholarship.

### Introduction

#### What is bibliometrics?

The branch of library science concerned with the application of mathematical and statistical analysis to bibliography; the statistical analysis of books, articles, or other publications. (Oxford English Dictionary Online)

In other words... data about publications, or citation frequency.

Scientometrics is the branch of information science concerned with the application of bibliometrics to the study of the spread of scientific ideas; the bibliometric analysis of science. (Oxford English Dictionary Online)

#### Why is bibliometrics important?

A student asks you "What are the best journals in my field?"

A professor asks you "How do I check who is citing my articles? How many times have I been cited?"

A student asks you "How do I know this article is important?"

A professor asks you "How can I compare the research impact between journals so I know which journal should I publish in?"

Bibliometrics affects:

- People
- Journal collections
- Research Funding
- Tenure
- Expertise status in the field
- Finding others in the field/subject area (using citation searching)

### Law of Scattering

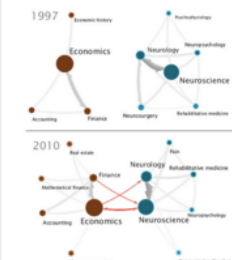

80% of the citations come from about 20% of the journals cited, identifying a core list for a local journal collection.

-- (Chung, 2007)

### Sample bibliometric map

#### The emergence of neuroeconomics

This map, constructed using journal-level citation data from the Journal Citation Reports, highlights the role of neuroeconomics in bringing together research in economics and in neuroscience.

Thomson Reuters (ISI Web of Knowledge)

## DISTINGUISH YOURSELF IN THREE EASY STEPS

ORCID provides a persistent digital identifier that distinguishes you from every other researcher and, through integration in key research workflows such as manuscript and grant submission, supports automated linkages between you and your professional activities ensuring that your work is recognized. [Find out more.](#)

**1 REGISTER** Get your unique ORCID identifier [Register now!](#) Registration takes 30 seconds.

**2 ADD YOUR INFO** Enhance your ORCID record with your professional information and link to your other identifiers (such as Scopus or ResearcherID or LinkedIn).

**3 USE YOUR ORCID ID** Include your ORCID identifier on your Webpage, when you submit publications, apply for grants, and in any research workflow to ensure you get credit for your work.

### MEMBERS MAKE ORCID POSSIBLE!

ORCID is a non-profit organization supported by a global community of organizational members, including research organizations, publishers, funders, professional associations, and other stakeholders in the research ecosystem.

Curious about who our members are? See our complete list of member organizations

## Publishing open access

By publishing open access or making a version of your published work available open access, you are providing free, unrestricted online access to scholarly materials that a number of people — including professional practitioners, industry workers and people in institutions and countries that are unable to afford subscriptions — would not otherwise have.

There are many avenues for publishing open access, and a good resource is the [Directory of Open Access Journals \(DOAJ\)](#) [@](#), which lists the journals and publishers that facilitate open access publishing.

The [Guide to OA monograph publishing](#) [@](#) is a useful resource for those looking for information about open access monograph publishing.

To gain a broader understanding of open access publishing [watch this short video](#) [@](#), produced by [PHD Comics](#) [@](#).

## Open access journals—gold open access

Publishing in an open access journal often means an article is assigned a creative commons licence permitting it to be distributed openly across a number of networks. You may be required to pay the publisher an upfront fee, or author processing charge (APC), to make the work openly available on the web. Publishing in this way is typically referred to as Gold Open Access.

[Gold open access](#) [@](#)

## Subscription-based journals—green open access

Publishing in a traditional subscription-based journal means your published work is immediately available to journal subscribers.

Articles published in these journals can still be made open access by making a pre or post print version of your article available in an open access repository such as the University's Digital Collections. This form of publishing is known as Green Open Access, or self-archiving.

Alternatively, an author payment charge (APC) can be paid for an article in a subscription journal to be made open access in that journal — this is known as hybrid publishing, and is not supported at ANU.

[Green open access](#) [@](#)

## Paying for publication

At this time, ANU does not have a centrally administered fund for paying for publication. Check with your College research staff for available funds, and make sure you know your funder's policy in regard to using grant money for paying for publication.

## Predatory publishing

While the benefits of open access publishing are undeniable, its evolution has seen the emergence of enterprises that run conferences and journals with low or no peer review or other quality mechanisms. These predatory publishers solicit contributions to reputable sounding journals and conferences promising publication, however they do not provide a quality contribution to careers.

The ANU University Librarian recently provided some [practical advice to researchers](#) (PDF, 1.6MB) on how to prevent exploitation by predatory or vanity publishers, reiterating three major tips:

- If you haven't heard of the journal or conference check [Beall's list](#) or ask your local librarian
- Don't believe the website – ask your colleagues and look at indicators of journal impact. A library's guide to increasing your research impact with information on journal measures and tools can help you
- Don't respond to unsolicited emails – choose the journals you wish to submit to.

### Why Do You Need to Manage Your Data?

**The carrot:**

- improvements to efficiency - managing data at the last minute and using the first method that comes to mind is usually time-consuming and error-prone
- protection - loss of data can be a disaster
- quality - data that is carefully managed has a much greater likelihood of being quality data
- exposure - data is now recognised as a scholarly output and good data management maximizes the impact of your work, increasing the visibility of your research and extending its relevance; data citation standards are at a critical stage with general acceptance of the use of DOIs (Digital Object Identifiers) and a major database specific to data citation is soon to be released

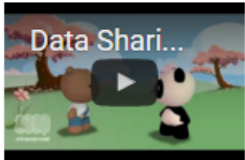

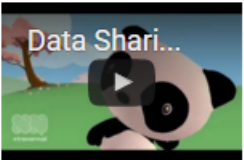

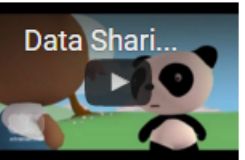

**The stick:**

- basic data management is required by the *Australian Code for the Responsible Conduct of Research*, and compliance with the *Code* is already a requirement for ARC and NHMRC funding and is likely to be mandated by other funding bodies, government and institutions in the near future
- inadequate data management can also lead to catastrophes like the loss of data or the violation of people's privacy

[Comments \(0\)](#)

### A Data Management Horror Story

This is a mini series of Youtubes by NYU Health Sciences Libraries showing what shouldn't happen when a researcher makes a data sharing request.

### ANU in RDA

The Australian National University (ANU) is a place of intensive research, and this is reflected in the variety and quality of ANU dataset descriptions in the Research Data Australia (RDA) database.

[View ANU Records in RDA](#)
